

ENTERPRISE REMOTE MONITORING

Reduce readmissions. Add a digital revenue stream. Scale remote monitoring across your entire network.

Agatsa One's hospital-grade platform lets you deploy remote patient monitoring for post-discharge cardiac patients, chronic disease cohorts, and preventive screening programmes — with full white-label options.

30%

Average reduction in 30-day readmissions (post-cardiac programme)

₹39,999/mo

Full hospital-grade platform — unlimited patients

48hrs

Average go-live from contract to first patient enrolled

Clinical Use Cases

Post-Discharge Cardiac Monitoring

Monitor post-MI, post-CABG, and post-valve patients at home for 8–12 weeks. Nera AI flags deterioration before it becomes a readmission. Structured daily task lists keep patients adherent throughout recovery.

Chronic Disease Management

Deploy hypertension, diabetes, and metabolic syndrome programmes at scale. Every patient gets a device, an AI coach, and a care pathway. You see the aggregate dashboard and individual red flags.

Camp Screening & OPD Integration

Run bulk ECG screening camps. Patients scan a QR code, complete a reading in 30 seconds, and their results feed into your Agatsa One portal automatically. Export to your HIS/EMR seamlessly.

White-Label Deployment

Deploy under your own hospital brand. Your logo, your colours, your patient app. Full white-label available for health systems with 500+ patient capacity — full control of the patient experience.

Platform Features

✓ Unlimited patient capacity

✓ Multi-location / multi-department dashboards

✓ Role-based access (cardiologist / nurse / admin)

✓ Branded patient app (white-label)

✓ Dedicated implementation team

✓ HL7 FHIR-ready API for EMR integration

✓ Bulk patient onboarding via CSV

✓ Aggregate population health analytics

✓ SLA-backed uptime (99.9%)

✓ HIPAA-aligned data architecture

EMR & HIS Integration: Agatsa One integrates with leading Indian HIS platforms. Our HL7 FHIR-compatible API allows ECG readings, vitals data, and Nera AI risk scores to flow directly into your existing electronic medical record system — zero duplicate data entry for clinical staff.

Book a hospital deployment demo

Our team will configure a pilot for your institution in under 48 hours.
